

POST /api/v1/initDemoDb

Description: This endpoint populates an empty database with several movies, actors, and their relationships, creating a demo database.

Query Parameters: None

URL Example: <http://localhost:8080/api/v1/initDemoDb>

Response: None

Output Example: Demo database has been initialized.

Expected Response:

200 OK - For a successful demo database creation

400 BAD REQUEST - If the database already has movies, actors, and their relationships before the endpoint is called

500 INTERNAL SERVER ERROR - For an unsuccessful database add (Java Exception Thrown)

DELETE /api/v1/nuke

Description: This endpoint clears all movies, actors and their relationships from the database.

Query Parameters: None

URL Example: <http://localhost:8080/api/v1/nuke>

Response: None

Output Example: All data has been removed.

Expected Response:

204 NO CONTENT - For a successful database nuke

500 INTERNAL SERVER ERROR - For an unsuccessful database nuke (Java Exception Thrown)
